619032-MTA

AdBlue® Magnetic Tank Spout Adaptor

The Alemlube 619032-MTA Magnetic Tank Spout Adaptor is designed to prevent miss-filling AdBlue® into a diesel fuel tank. This universal ISO certified magnetic filler neck collar fits into any vehicle's AdBlue® fill point, so that when used in conjunction with an automatic magnetic spout nozzle (such as the Piusi SB325 AdBlue® automatic nozzle), it will prevent your AdBlue® nozzle from being able to dispense into anything other than an AdBlue® tank.

AdBlue® is commonly mistaken as a fuel additive, when actually it should not be mixed with diesel at all and is dispensed into a completely different tank.

The 19mm ID of the magnetic adaptor prevents larger diesel nozzle spouts from fitting into the fill point therefore avoiding the miss-filling of diesel fuel into an AdBlue® tank.

The miss-filling of AdBlue® is a common problem and considering that AdBlue® is not compatible with the pipework and components of a fuel system, measures taken to correct the problem result in eliminating unnecessary costs and an inefficient allocation of time and resources.

To meet ISO standards, most new AdBlue® using vehicles and plant machinery already have a magnetic collar inserted into the AdBlue® fill point at manufacturing stage.

However, if you think your vehicles or machinery do not have a magnetic collar fitted, then retrofitting the Alemlube 619032-MTA Magnetic Tank Spout Adaptor is the answer to provide you with safe and secure AdBlue® filling practices into the future.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

For use with magnetic spout AdBlue® automatic nozzles

AdBlue® automatic nozzles will not function without the 619032-MTA

19mm ID

Prevents larger diesel nozzles from fitting the AdBlue® tank fill point

Universal ISO certified
