INFORMATION

9978 Spring Operated Drum Pump

November 2021

Ideal for the topping up of engines, gear boxes, transmissions and differentials, workshop mechanics can perform oil changes more quickly with the aid of the “99” Series of drum pump from Alemlube.

Simply prime the 9978 (engine oils) by pushing down on the piston and spring assembly, open the hand piece and up to 500mls of lubricant or transmission fluid will be dispensed.

The drainback nozzle holster in the pump head assembly reduces the chance of oil spillage and the swivelling head assembly allows the pump outlet to follow the operator, eliminating annoying hose links.

For quick and easy lubricant and transmission fluid transfer, choose the 9978 (engine oils) drum pump from Alemlube.

SPECIFICATIONS, FEATURES AND BENEFITS

- Ideal for the topping up of engines, gear boxes, transmissions and differentials
- Spring operated pump and lever action control valve facilitates semi automatic lubricant and ATF transfer
- Unique swivelling pump head assembly allows the hose to “follow” the operator, thus reducing the chance of annoying hose kinks
- Robust zinc pump head assembly and ground shafts with O-ring seals ensure long working life
- Includes UV stabilised hose, lever action oil control valve and drain back nozzle holster
- Provides an economical and efficient means of handling and dispensing the ever increasing number of grades of oil and types of ATF that now need to be carried to conform with manufacturers lubricant specification requirements.
